

# X25

The X25 thermal clip on scope converts your existing day scope to thermal and provides excellent target acquisition and aiming capabilities for the demanding sports shooter, varmint hunter, military, law enforcement, or security personnel. The X25 thermal imaging sight eliminates the traditional requirement of removing your existing day scope from your rifle, to replace it with a dedicated thermal sight (which would also involve re-zeroing). The X25 simply mounts in front of your own standard day optical sight. Factory bore-sighted to a tolerance of less than 1 MOA, no re-zeroing is required. The X25 thermal imaging scope allows the user to maintain consistent eye relief and shooting position, and because the user views his own day scope's reticle (which he is familiar with), no re-training is required.
